Dear Sir/Madam

Letter of Recommendation for Thaddeus Chua

I am pleased to write this letter of recommendation for Mr. Thaddeus Chua, an outstanding undergraduate student from the School of Mechanical and Aerospace Engineering at Nanyang Technological University, Singapore. I had the privilege of teaching Thaddeus in two modules, MA1701 and MA4704, and I also served as the supervisor for his Final Year Project (FYP). Through these engagements, I had ample opportunity to observe his academic abilities, research aptitude, and personal qualities over an extended period.

For his FYP, Thaddeus undertook a challenging research topic involving the investigation of tandem flapping foils of different geometries in a water tunnel, with the aim of enhancing thrust performance. This project required a solid understanding of fluid mechanics, experimental methods and data analysis, as well as a high level of perseverance. Thaddeus demonstrated a strong intellectual curiosity throughout the project and consistently sought to deepen his understanding by asking insightful questions and exploring ideas beyond the minimum project requirements.

Thaddeus worked with a high degree of independence and self-discipline, requiring minimal supervision from both myself and my postdoc. He took the initiative to learn and familiarise himself thoroughly with the experimental setup and operating procedures, including calibration, data acquisition, and post-processing techniques. His ability to quickly grasp complex experimental methodologies and apply them accurately was particularly impressive. Given the demanding nature of the project, Thaddeus often spent long hours working in the water tunnel. Despite the physically demanding, time-intensive, and at times arduous aspects of the work, he remained highly motivated, goal-oriented, and professional, never once expressing complaints or showing a decline in commitment.

Beyond his academic and research capabilities, Thaddeus has also demonstrated adaptability and maturity through his participation in two overseas exchange programmes during his undergraduate studies. These experiences exposed him to diverse academic environments and cultures, further enhancing his ability to adapt to new settings and work effectively with people from different backgrounds.

In summary, Thaddeus is a highly capable, motivated, and intellectually driven individual. His academic foundation, research skills, independence and genuine enthusiasm for learning make him an excellent candidate for your organisation. Please do not hesitate to contact me should you require any additional information.
